ABSTRACTED-PUB-NO: JP 06108307A

BASIC-ABSTRACT:

An acrylonitrile (AN) based high hygroscopic fibre is obtd. by spinning compsn. contg. 5-70 pts.wt. of collagen having less than 10 microns average particle size into soln. having 100 pts.wt. of AN based polymer dissolved in solvent. The AN based high hygroscopic fibre has following properties: official regain at least 3 wt.%; fineness upto 20 d.; tensile strength at least 1 g/d; tensile elongation at least 5%; initial elastic modulus at least 10 g/d.

The AN based polymer may be copolymer with cpd. such as vinyl acetate, vinylidene chloride, acrylamide, methyl methacrylate, acrylic acid, methyl acrylate, vinyl bromide, sodium methacryl sulphonate. The solvent include ordinary solvent for PAN, such as dimethyl acetamide, DMF, DMSO, gamma-butyro lactone, ethylene carbonate, sodium thiocyanic nitrate.

USE/ADVANTAGE - The AN based high hygroscopic fibre is useful for clothes. The AN based high hygroscopic fibre has appropriate fibre property and excellent post process passing through property, and also unique handling touch peculiar to collagen addition, further very good touch feeling.
